

# RSSM World Model Training: 14 Domains, 8 Math Classes

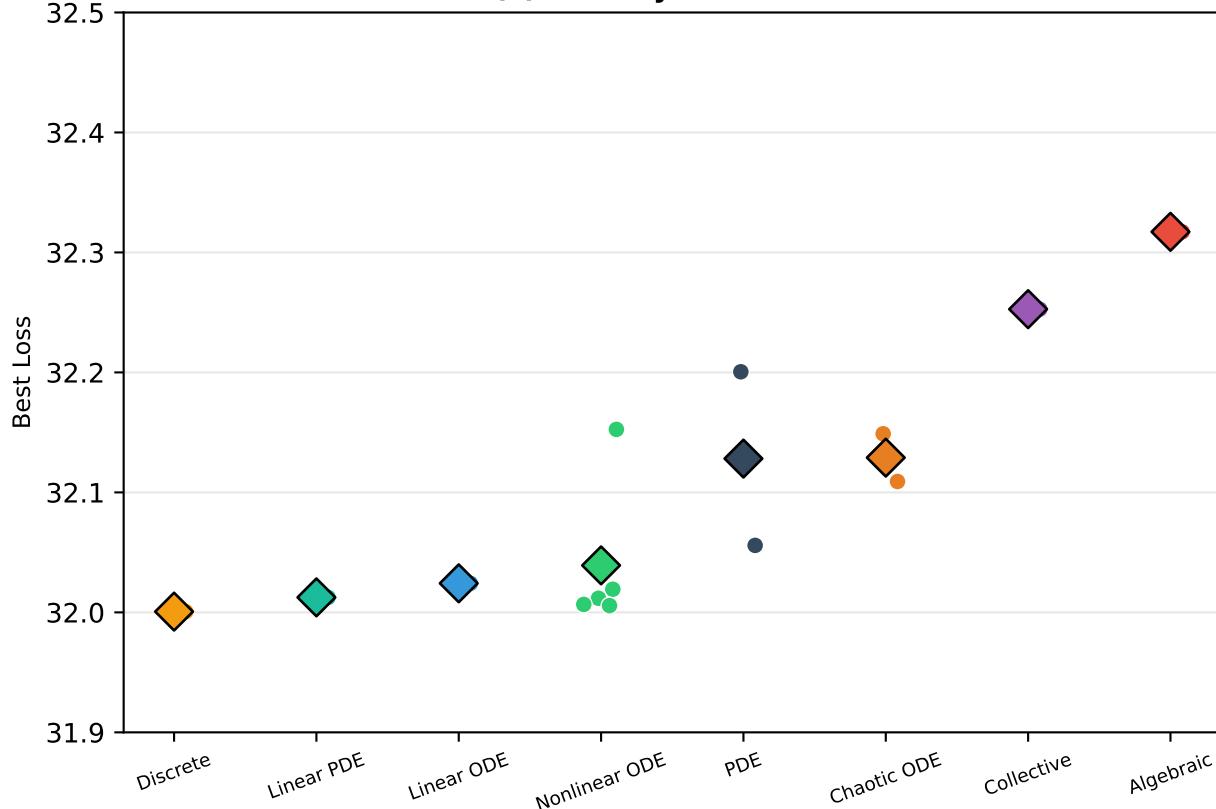

**(a) Loss by Domain**

**(b) Training Time vs Obs. Dim**

**(c) Loss by Math Class**

**(d) Summary**

**RSSM World Model Training Summary**  
=====

Parameter	Value
Domains trained:	14
Math classes:	8
Epochs per domain:	50
Hardware:	RTX 5090 (32GB)
Loss (mean +/- std):	32.09 +/- 0.10
Loss range:	[32.00, 32.32]
Obs. dim range:	[1, 8192]
Mean training time:	168s
Total training time:	2357s (39.3min)

Key finding: All domains converge to ~32.0 loss regardless of math class, observation dimension, or dynamics type. This validates the domain-agnostic RSSM architecture.
